PROFESSIONAL SUMMARY

BCA graduate from Maharaja Sayajirao University of Baroda with hands-on experience building production-ready web applications, RESTful APIs, and machine learning pipelines. Delivered a real-client internship project integrating payment gateways, analytics tracking, and automation workflows. Author of JobHunter-AI, a multi-threaded Flask engine for automated job outreach with live analytics dashboards. Seeking internship roles in Full Stack Development, Python/Backend Engineering, or AI/ML where I can contribute immediately.

TECHNICAL SKILLS

Languages:	Python, JavaScript (ES6+), SQL, PHP, HTML5, CSS3
Frontend:	React.js, Next.js, Responsive Design, Chart.js, Tailwind CSS, WordPress/Elementor
Backend:	Flask, Node.js, REST API Design, SMTP/IMAP, Webhooks, Multi-threading, Web Scraping
Databases:	MongoDB Atlas, MySQL, Firebase, SQL query optimization
AI / ML:	Scikit-learn, TF-IDF, Logistic Regression, Decision Trees, k-NN, Naive Bayes, Pandas, NumPy, Matplotlib
DevOps:	Git, GitHub, GitHub Actions (CI/CD), Docker, Linux CLI
Integrations:	Razorpay, Google Sheets API, Meta Pixel / Conversion API, Google Tag Manager, Omnisend

WORK EXPERIENCE

Web Development Intern | [Arctikk Circle](#) Mar 2026 – Apr 2026

- Built a 3-page course sales funnel from scratch, driving end-to-end customer journey from landing page through payment confirmation and onboarding sequences.
- Integrated Razorpay payment gateway and configured Omnisend automated email flows, reducing manual post-purchase follow-up by 100%.
- Deployed Google Tag Manager, Meta Pixel, and Meta Conversion API to enable server-side event tracking, improving ad attribution accuracy.
- Developed a custom WordPress admin plugin that empowered non-technical staff to manage customer records independently, eliminating developer dependency for routine ops.
- Automated order data sync via Google Sheets API, cutting manual record-keeping effort and ensuring real-time data accuracy.
- Maintained full Git version control throughout the project, enabling clean rollbacks and collaborative code review.

PROJECTS

JobHunter-AI – Autonomous Job Outreach Engine | [Github](#) Mar 2026 – May 2026

Stack: Python · Flask · Chart.js · SQLite · SMTP/IMAP · GitHub Actions

- Engineered a Flask application that scrapes job postings across multiple sources using concurrent worker threads, reducing lead collection time by ~70% vs. manual search.
- Built a role-classification engine (`_get_role_context`) that dynamically personalizes email subject lines, intro copy, and bullet highlights across 10+ job-role categories.
- Implemented email validation with MX record verification to cut bounce rates before outreach, protecting sender reputation.
- Designed a 6-tab dark-theme analytics dashboard (Dashboard, Hunter, Sender, Leads, Bounces, Settings) with live send-progress bars and Chart.js visualizations.
- Configured GitHub Actions CI/CD pipeline for automated linting and test runs on every push.

Fake News Detector – ML Classification System | [Github](#) Aug 2025 – Nov 2025

Stack: Python · Flask · Scikit-learn · TF-IDF · Logistic Regression · pytest

- Trained a TF-IDF + Logistic Regression classifier on a labeled news dataset, achieving strong classification accuracy for real vs. fake articles.
- Exposed the model via RESTful Flask API endpoints, enabling real-time inference for any text payload.
- Wrote a pytest suite with 85% code coverage, catching edge-case misclassifications before deployment.
- Applied NLP preprocessing (stopword removal, stemming, vectorization) and hyperparameter tuning to maximize F1-score.

Matchmaker MVP – Full Stack Dashboard | [Matchmaker Dashboard](#) 2026

Stack: React.js · Node.js · MongoDB Atlas · REST API

- Built a matchmaking dashboard supporting 120+ realistic user profiles with advanced search and filtering.
- Developed compatibility scoring across age, location, profession, lifestyle, values, and cultural preferences.
- Integrated AI-powered match explanations and personalized introduction generation.
- Implemented secure authentication and role-based access workflows.

EDUCATION

Bachelor of Computer Applications (BCA) | AI/ML Specialization 2023 – 2026

Maharaja Sayajirao University of Baroda, Vadodara · CGPA: 7.39

Relevant Coursework: Data Structures & Algorithms · DBMS · Operating Systems · Computer Networks · Artificial Intelligence · Machine Learning · Software Engineering · OOP · Web Technologies

CERTIFICATIONS

- AI Fluency Framework & Foundations — Anthropic (May 2026)
- Generative AI — Google (May 2026)
- Frontend Developer (React) — HackerRank (May 2026)
